

SUPERVISORY CONTROL

The plant is controlled and policed by an all encompassing supervisory propriety human machine interface based control system.

The system will constantly monitor the plants performance and automatically trim and correct any out of tolerance parameter.

Interfaced with the emission monitoring package, the system will record, report and archive the emissions to atmosphere such as NO_x, SO₂, HCl, Particulates, O₂, CO, H₂O, TOC, as well as the status of any alarms, charge cycles and system variables.
